

Subject: GMO Moratorium submission
Date: Monday, 22 April 2019 10:32:49 PM

Good evening

I urge the Tasmanian Government to continue to maintain the moratorium on the introduction of Genetically modified organisms into Tasmania.

Most importantly the use of herbicides on crops modified to resist the effects of products such as Glyphosate must be avoided particularly as this particular product has been proven to have direct links to Non Hodgkins Lymphoma.

Secondly, as a bee keeper and educator in horticulture and agriculture, I am deeply concerned the wellbeing of other organisms cannot be guaranteed against the effects of GM organisms active in the environment; their effects in the food-chain and pollination processes cannot be controlled or contained thus they must not be introduced.

Thank you for the opportunity to express my wishes.

Michael Rowland
Horticulture Teacher
