

# Do you own a dog or have contact with dogs?

**HYDATID DISEASE**  
does not make  
a dog sick—  
but it can make  
people very sick.

## Protect you and your family:

- 🐾 **Never feed offal (internal organs) to dogs**
- 🐾 **Never let your dog roam or scavenge**
- 🐾 **Worm dogs regularly** (wormer must contain 'praziquantel')
- 🐾 **Wash hands after handling dogs**

It took a 30-year campaign in Tasmania to stop our people getting sick, or in some cases, dying from hydatid disease.

**LET'S KEEP IT THAT WAY!**
