

What constitutes a “Small Amount” of Agricultural Chemical Product

ISSUE DATE: JUNE 2006
FORMAT UPDATED: MAY 2014

For the purposes of Regulation 8 of the *Agricultural and Veterinary Chemicals (Control of Use) Regulations 1996*, a “small amount” of agricultural chemical product means any amount of this type of product which is registered, packaged and labelled for use as a home garden product in Tasmania. This is provided the product is purchased, stored and handled in packages which are approved for home garden use.

If you provide a service for fee or reward which involves some spraying, but the spraying is only incidental to the main service you deliver and you only spray a **small amount** of agricultural chemical product, you **do not** need to have a commercial operator’s licence. To qualify for this exemption, you must purchase, store and handle the products in the containers in which they were sold for home garden use.

Home garden products are registered by the Australian Pesticides and Veterinary Medicines Authority and labelled in accordance with the Code of Practice for Labelling Home Garden and Domestic Pest Control Products. They are made available to the general public from nurseries and gardening/hardware stores. Some examples of products which are registered for home garden use are shown below. This list is not exhaustive. There are a number of other products which are registered for home garden use which may be just as effective as those products shown.
