

TASVEG Update #3

10 March 2015

Dear TASVEG stakeholder, we are pleased to make the following announcements.

TASVEG searches and Notifications are now available via the NVA

TASVEG Searches

The latest version of the [Natural Values Atlas](#) (released on Tuesday 3/03/2015) features a new tool that enables customised searches of the TASVEG Live layer by attribute value and/or spatial area and download of search results as a zipped shapefile ready for use in your own mapping applications. Log in to the NVA to use these new features.

TASVEG Notifications

This release also incorporates the TASVEG Notification Service. This new service enables users to provide feedback on the accuracy of TASVEG mapping polygons and facilitates upload of images and other documents to support any proposed changes. For further information about the TASVEG Notifications Service see the [TVMMP web site](#) or contact TVMMPsupport@dpipwe.tas.gov.au.

Help documentation on how to use this new functionality is attached in the following pdf:

[NVA Instructions - How to Search for TASVEG features and create notifications](#)

Please contact the TASVEG team if you have any questions relating to the amendments outlined above: TVMMPsupport@dpipwe.tas.gov.au.

Warm regards from the TASVEG team
