

REGISTER FOR TASMANIAN UNWANTED QUARANTINE PEST (UQP) DECLARATIONS SINCE DECEMBER 2010 – DEC 2021

(Sections 8 – 9 of the *Plant Quarantine Act 1997* apply)

- Unwanted Quarantine Pests (UQPs) are pests of intermediary concern, which are not officially regulated for through formal Import Requirement, unlike Section 12 List A & B pests (& diseases) which are Tasmania's 'Regulated Quarantine Pests' (RQPs - see Section 12 Lists separately online).

UQPs are partially declared under the *Plant Quarantine Act 1997*, as described in Section 1.10 of the *Plant Biosecurity Manual Tasmania (PBMTas)*. The risk that UQP's may present is managed through one or more regulatory levers or control points, such as:

- the biosecurity border; and/or
- Industry quality assurance programs; and/or
- targeted seasonal risk pathway specific barrier inspection programs.
- The UQP list of pests and diseases of quarantine concern to Tasmania is maintained separately from the Section 12 List A & B pests (& diseases), as the latter RQP listing is formally required to be published annually under Section 12 of the *Plant Quarantine Act 1997*.
- If UQP's are detected at the biosecurity border, regulatory action can be taken, whether it be by consignment treatment, rejection or deep burial of the non-compliant prescribed matter.
- Compilation of this pest listing commenced in January 2011.

PLEASE NOTE:

- The great majority of UQPs are not present in Tasmania, but exceptions do apply such as pests present which vector important pests of regulatory concern which are not present, or hold a wide range of physiologic variation not present in the State
- **Any more recent UQP declaration changes between this edition of the Manual and the next edition can be found on the pest declaration summary table held on DPIPWE's web site under 'Biosecurity Tasmania' (see www.dpipwe.tas.gov.au)**

Entries are listed as a cross-index; first by *pest scientific name*, second by *pest common name*, third by *pest group*, and fourth by *date*.

Key: Dec(s) = Declaraion(s); IR = Import Requirement; PBMTas = Plant Biosecurity Manual Tasmania; s = Section (of the Act); NA = Not Applicable

PLEASE NOTE: Some declaration effects are time delayed from date of Notice issue: ¹ Notice issued 9/11/2011, taking effect on 21/12/2011; ² Notice issued 28/11/2013, taking effect on 18/12/2013

¹ Though *Didymo* is not yet reported to be present in Australia, it is still cited as a UQP because of the very high degree of risk it presents for gaining entry into Australia and Tasmania through existing known pathways. Consequently vigilance is required for inspection of 'at risk' materials and goods at the State biosecurity barrier.

² Though the pest may be present and even widespread in the State, it qualifies as a UQP if it is known to vector one or more RQPs or UQPs of concern to Tasmania. Action can be taken if detected at the Biosecurity Barrier.

³ Represents species of pest/pathogen that though present in the State, are proven to have a very wide range of physiologic variation, not yet present in the State

⁴ Though officially believed to be not present, further targeted surveillance may need to be taken to prove the case

Key: Dec(s) = Declaraion(s); IR = Import Requirement; PBMTas = Plant Biosecurity Manual Tasmania; s = Section (of the Act); NA = Not Applicable

PLEASE NOTE: Some declaration effects are time delayed from date of Notice issue: ¹ Notice issued 9/11/2011, taking effect on 21/12/2011; ² Notice issued 28/11/2013, taking effect on 18/12/2013

¹ Though *Didymo* is not yet reported to be present in Australia, it is still cited as a UQP because of the very high degree of risk it presents for gaining entry into Australia and Tasmania through existing known pathways. Consequently vigilance is required for inspection of 'at risk' materials and goods at the State biosecurity barrier.

² Though the pest may be present and even widespread in the State, it qualifies as a UQP if it is known to vector one or more RQPs or UQPs of concern to Tasmania. Action can be taken if detected at the Biosecurity Barrier.

³ Represents species of pest/pathogen that though present in the State, are proven to have a very wide range of physiologic variation, not yet present in the State

⁴ Though officially believed to be not present, further targeted surveillance may need to be taken to prove the case

<i>Tobacco necrosis virus</i> (TNV)	TNV – vectored by <i>Olpidium brassicae</i>	Virus	No	9-11-2011 ¹	Revoked List A Disease (s11 dec; retained s9)

Key: Dec(s) = Declaraion(s); IR = Import Requirement; PBMTas = Plant Biosecurity Manual Tasmania; s = Section (of the Act); NA = Not Applicable

PLEASE NOTE: Some declaration effects are time delayed from date of Notice issue: ¹ Notice issued 9/11/2011, taking effect on 21/12/2011; ² Notice issued 28/11/2013, taking effect on 18/12/2013

¹ Though *Didymo* is not yet reported to be present in Australia, it is still cited as a UQP because of the very high degree of risk it presents for gaining entry into Australia and Tasmania through existing known pathways. Consequently vigilance is required for inspection of 'at risk' materials and goods at the State biosecurity barrier.

² Though the pest may be present and even widespread in the State, it qualifies as a UQP if it is known to vector one or more RQPs or UQPs of concern to Tasmania. Action can be taken if detected at the Biosecurity Barrier.

³ Represents species of pest/pathogen that though present in the State, are proven to have a very wide range of physiologic variation, not yet present in the State

⁴ Though officially believed to be not present, further targeted surveillance may need to be taken to prove the case
