

## DAS *Eucalyptus amygdalina* forest and woodland on sandstone: (woodland)

### Community Description:

*Eucalyptus amygdalina* forest and woodland on sandstone is characterised by an open canopy of *E. amygdalina*, uneven in age and tending not to exceed 25m. They are dry sclerophyll communities with tall shrubby understoreys and a shrubby, heathy, sedgy and sometimes grassy ground layer. This benchmark is one of 2 benchmarks available to assess the condition of DAS. It is the appropriate benchmark to use in assessing the condition of the woodland component of the listed *Eucalyptus amygdalina* forest and woodland on sandstone community (Schedule 3A, Nature Conservation Act 2002).
